Questions

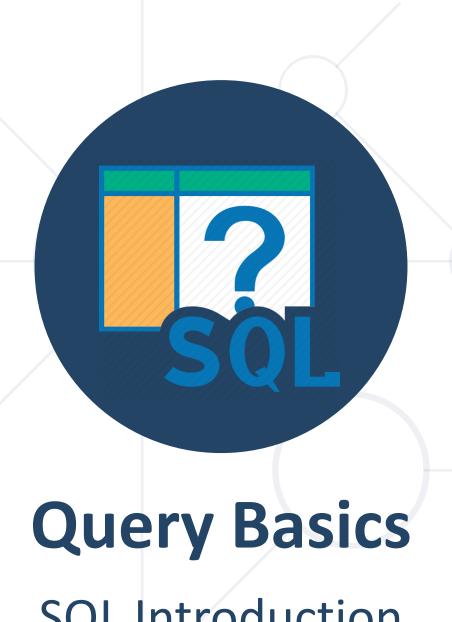

Table of Contents

- 1. Query Basics
- 2. Retrieving Data
- 3. Writing Data in Tables
- 4. Modifying Existing Records

SQL Introduction

SQL Queries – Few Examples

Select first, last name and job title about employees:

```
SELECT first_name, last_name, job_title FROM employees;
```

Select projects which start on 01-06-2003:

```
SELECT * FROM projects WHERE start_date='2003-06-01';
```

• Inserting data into table:

```
INSERT INTO projects(name, start_date)
VALUES('Introduction to SQL Course', '2006-01-01');
```

SQL Queries – Few Examples

Update end date of specific projects:

```
UPDATE projects
   SET end_date = '2006-08-31'
WHERE start_date = '2006-01-01';
```

Delete specific projects:

```
DELETE FROM projects
WHERE start_date = '2006-01-01';
```

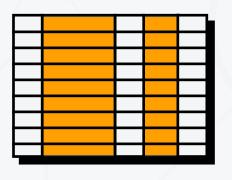

Using SQL SELECT

Capabilities of SQL SELECT

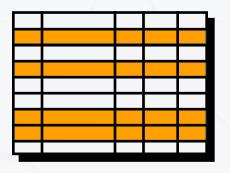

Projection

Take a subset of the columns

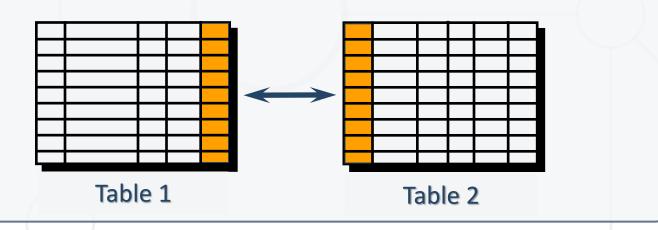

Selection

Take a subset of the rows

Join

Combine tables by some column

SELECT – Examples

Selecting all columns from the "employees" table

id	first_name	last_name	job_title	department_id	salary
1	John	Smith	Manager	1 (900
2	John	Johnson	Customer Serv ice	1	880
3	Smith	Johnson	Porter	2	1100
•••		<i></i>	•••		

SELECT * FROM employees;

List of columns (* for all)

Table name

Problem: Select Employee Information

- Write a query to select all employees from "Hotel" database
 - Retrieve information about their id, first_name, last_nameand job_title
 - Ordered by id
- Note: Query Hotel database

id	first_name	last_name	job_title
1	John	Smith	Manager
2	John	Johnson	Customer Servi ce
3	Smith	Johnson	Porter
•••	•••		•••

Solution: Select Employee Information

Aliases rename a table or a column heading:

```
SELECT e.id AS 'No.',
e.first_name AS 'First Name',
e.last_name AS 'Last Name',
e.job_title AS 'Job Title'
FROM employees AS e ORDER BY id;
```

Concatenation

- concat() returns the string that results from concatenating the arguments
 - String literals are enclosed in ['](single quotes)
 - Table and column names containing special symbols use
 [`] (backtick)

```
SELECT concat(`first_name`,' ',`last_name`) AS 'full_name',
    job_title` as 'Job Title',
    id` AS 'No.'
FROM `employees`;
```

Concatenation

 Another function of concatenation is concat_ws() - stands for concatenate with separator and is a special form of CONCAT()

```
SELECT concat_ws(' ', first_name', `last_name', `job_title')
AS 'full_name',
    job_title` AS 'Job Title',
    id` AS 'No.'
    FROM 'employees`;
```

Skip any NULL values after the separator argument.

Problem: Select Employees with Filter

- Find information about all employees, listing their:
 - Full Name
 - Job title
 - Salary
- Use concatenation to display first and last names as one field
- Note: Query Hotel database

Solution: Select Employees with Filter

Concatenation

```
SELECT concat(`first_name`,' ',`last_name`) AS
    'Full name',
    job_title` AS 'Job title',
    salary` AS 'Salary'
FROM `employees` WHERE salary > 1000;
```

Filtering the Selected Rows

Use DISTINCT to eliminate duplicate results

```
SELECT DISTINCT `department_id`
FROM `employees`;
```

You can filter rows by specific conditions using the WHERE clause

```
SELECT `last_name`, `department_id`
FROM `employees`
WHERE `department_id` = 1;
```

Other logical operators can be used for better control

```
SELECT `last_name`, `salary`
FROM `employees`
WHERE `salary` <= 20000;</pre>
```

Other Comparison Conditions

Conditions can be combined using NOT, OR, AND and brackets

```
SELECT `last_name` FROM `employees`
WHERE NOT (`manager_id` = 3 OR `manager_id` = 4);
```

Using BETWEEN operator to specify a range:

```
SELECT `last_name`, `salary` FROM `employees`
WHERE `salary` BETWEEN 20000 AND 22000;
```

Using IN / NOT IN to specify a set of values:

```
SELECT `first_name`, `last_name`, `manager_id`
FROM `employees`
WHERE `manager_id` IN (109, 3, 16);
```

Problem: Select Employees by Multiple Filters

- Write a query to retrieve information about employees, order by id
 - Who are in department 4
 - Have salary higher or equal to 1000

id	first_name	last_name	job_title	department_id	salary
3	Smith	Johnson	Porter	4	1100
9	Nikolay	Ivanov	Housekeeping	4	1600

SELECT * FROM employees AS e

WHERE e.department_id = 4 AND e.salary >= 1000;

Comparing with NULL

- NULL is a special value that means missing value
 - Not the same as ② or a blank space
- Checking for NULL values

This is always false!

```
SELECT `last_name`, `manager_id`
FROM `employees`
WHERE `manager_id` = NULL;
```

```
SELECT `last_name`, `manager_id`
FROM `employees`
WHERE `manager_id` IS NULL;
```

```
SELECT `last_name`, `manager_id`
FROM `employees`
WHERE `manager_id` IS NOT NULL;
```

Sorting with ORDER BY

- Sort rows with the ORDER BY clause
 - ASC: ascending order, default
 - DESC: descending order

```
SELECT `last_name`, `hire_date`
FROM `employees`
ORDER BY `hire_date`;
```

```
SELECT `last_name`, `hire_date`
FROM `employees`
ORDER BY `hire_date` DESC;
```

LastName	HireDate
Gilbert	1998-07-31
Brown	1999-02-26
Tamburello	1999-12-12
•••	

LastName	HireDate		
Valdez	2005-07-01		
Tsoflias	2005-07-01		
Abbas	2005-04-15		
•••	•••		

Views

- Views are virtual tables made from others tables, views or joins between them
- Usage:
 - To simplify writing complex queries
 - To limit access to data for certain users

Views

Table 1				
Column 1	Column 2	Column 3		
	\mathcal{A}			

Table 2				
Column 1	Column 2	Column 3		

v_table1_table2				
Column 1 Column 2 Column 3				

Views – Example

Get employee names and salaries, by department

```
CREATE VIEW `v_hr_result_set` AS
SELECT
        CONCAT(`first_name`,' ',`last_name`) AS 'Full Name',
`salary`
FROM `employees` ORDER BY `department_id`;
```

```
SELECT * FROM `v_hr_result_set`;
```

Problem: Top Paid Employee

- Create a view that selects all information about the top paid employee
 - Name the view v_top_paid_employee
 - Note: Query Hotel database

Solution: Top Paid Employee

```
CREATE VIEW `v_top_paid_employee`
AS

SELECT * FROM `employees`
ORDER BY `salary` DESC LIMIT 1;
```

Sorting column

Greatest value first

```
SELECT * FROM `v_top_paid_employee`;
```

Writing Data in Tables

Using SQL INSERT

Inserting Data

The SQL INSERT command

Values for all columns

```
INSERT INTO `towns` VALUES (33, 'Paris');
INSERT INTO projects(`name`, `start_date`)
VALUES ('Reflective Jacket', NOW())
Specify columns
```

Bulk data can be recorded in a single query, separated by comma

Inserting Data

You can use existing records to create a new table

```
CREATE TABLE `customer_contacts` New table name
AS SELECT `customer_id`, `first_name`, `email`, `phone`
FROM `customers`; Existing source
```

Or into an existing table
 List of columns

```
INSERT INTO projects(name, start_date)
SELECT CONCAT(name,' ', ' Restructuring'), NOW()
FROM departments;
```

Modifying Existing Records

Using SQL UPDATE and DELETE

Updating Data

The SQL UPDATE command

```
UPDATE `employees`
    SET `last_name` = 'Brown'
WHERE `employee_id` = 1;
```

Note: Don't forget the WHERE clause!

Problem: Update Employees Salary

Update all employees salaries whose job_title is "Manager"

by **100**

UPDATE employees
SET salary = salary + 100
WHERE job_title = 'Manager';
SELECT salary
FROM employees;

	salary
•	1000
	880
	1100
	1100
	1500.23
	990
	1800
	2100
	1600

Deleting Data

Deleting specific rows from a table

```
DELETE FROM `employees`
WHERE `employee_id` = 1;
```

Condition

- Note: Don't forget the WHERE clause!
- Delete all rows from a table (TRUNCATE works faster than DELETE)

TRUNCATE TABLE users;

Problem: Delete from Table

- Delete all employees from the "employees" table who are in department 2 or 1
- Order by id

	id	first_name	last_name	job_title	department_id	salary
•	3	Smith	Johnson	Porter	4	1100
	6	Ivan	Petrov	Waiter	3	990
	7	Jack	Jackson	Executive Chef	3	1800
	9	Nikolay	Ivanov	Housekeeping	4	1600

Solution: Delete from Table

Delete Data

OR Condition

DELETE FROM employees

WHERE department_id = 1

OR department_id = 2;

SELECT * FROM employees

Summary

We can easy manipulate our database with SQL queries

```
SELECT *
  FROM `projects`
  WHERE `start_date` = '2006-01-01';
```

 Queries provide a flexible and powerful method to manipulate records
